Loiva introduces seam sealing and welding machines from H&H

by Apparel Resources | 01-August-2012 | 2 mins read

Right solutions at the optimum prices with high quality standards have always been the mantra for Loiva dealing in a wide array of garment sewing machinery and attachments. The Korean pioneer has created a name for itself in the garment sewing industry, by providing simple machines armed with powerful attachments which offer value for money and are capable of competing with any high-end machine. Present at the GTE with full force, Loiva through its Indian wing, Loiva Intech had displayed fusing machines from Martin Group of Italy, auxiliary machines for shirts and taping solutions from Nissin of Singapore and from its own stable, the popular button wrapping and knotting machine with normal thread, digital button feeder and auto-jig machine for run-stitch operations.

Anshuman Dash, Loiva in centre with his team of principles

Representing the company at the fair Anshuman Dash of Loiva Intech said, "We already have a complete portfolio of solutions for apparels, and by adding seam sealing and welding machine from the Hong Kong based H&H, with more than 10 years of experience in this field, Loiva has taken the next step forward towards other parallel segments."

AI-001 is a hot air sealing machine from H&H with a maximum welding speed of 60 feet per minute. The machine has a 3D electronic nozzle positioning system and a differential speed top/bottom roller. The machine can also perform variable speed seam sealing and is really ergonomic in its use. Anshuman added that with the market and manufacturing of rain gear, wind breaker, ski jacket, tent, sleeping bag or a knapsack in camping equipment manufacturing, on the rise, there is a need of quality and cost-effective solutions, which is where the company believes has the edge.
